

# Addition

Objective and Strategies	Concrete	Pictorial	Abstract
<p>Combining two parts to make a whole: part-whole model</p>	 <p>Use cubes to add two numbers together as a group or in a bar. Then recount all using one-to-one correspondence.</p> <p>Pupils could place ten on top of the whole as well as writing it down. The parts could also be written in alongside the concrete representation.</p>	 <p>Use pictures to add two numbers together as a group or in a bar.</p>	<p><math>4 + 3 = 7</math></p>  <p>Use the part-part whole diagram as shown above to move into the abstract.</p> <p><math>10 = 6 + 4</math>  <math>10 - 6 = 4</math>  <math>10 - 4 = 6</math>  <math>10 = 4 + 6</math></p>

Starting at the bigger number and counting on

Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer.

$$12 + 5 = 17$$

Start at the larger number on the number line and count on in ones or in one jump to find the answer.

$$5 + 12 = 17$$

Place the larger number in your head and count on the smaller number to find your answer.

Make Ten Strategy

$$6 + 5 = 11$$

Start with the bigger number and use the smaller number to make 10.

Use pictures or a number line. Regroup or partition the smaller number to make 10.

$$7 + 4 = 11$$

If I am at seven, how many more do I need to make 10? And how many more do I add on?

Regrouping  
(exchanging)  
to make 10.

The colours of the beads on the bead string make it clear how many more need to be added to make ten.

$$3 + 9 =$$

NA

(This is an essential concrete/pictorial skill that will support the make ten strategy and column addition.)

Adding  
multiples of 10

Using the vocabulary of 1 ten, 2 tens, 3 tens etc. alongside 10, 20, 30 is important, as pupils need to understand that it is a **ten** and not a one that is being added.

$$50 = 30 + 20$$

$$3 \text{ tens} + 5 \text{ tens} = \underline{\quad} \text{ tens}$$

$$30 + 50 = \underline{\quad}$$

$$50 + 20 = 70$$

Children could count up in tens 50, 60, 70 or may recognise their number bonds  $5 + 2 = 7$  so  $50 + 20 = 70$ .

### Adding 1, 2, 3 more.

Here the emphasis should be on the language rather than the strategy. As pupils are using the beadstring, ensure that they are explaining using language such as;

'1 more than 5 is equal to 6.'

'2 more than 5 is 7.'

'8 is 3 more than 5.'

2 more than 5  $5 + 2 = 7$

$$5 + 1 = 6$$

$$5 + 2 = 7$$

$$5 + 3 = 8$$

### Adding three single digit numbers.

$$4 + 7 + 6 = 17$$

Put 4 and 6 together to make 10. Add on 7.

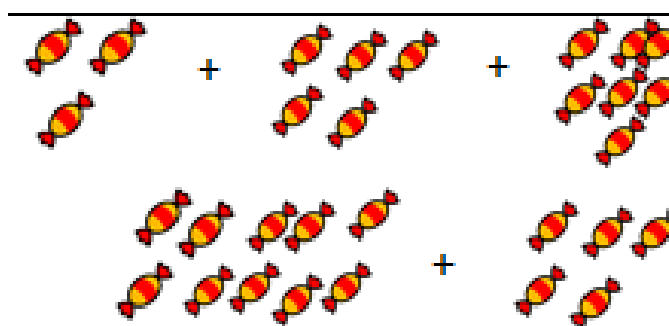

The first bead string shows 4, 7 and 6. The colours of the bead string show that it makes more than ten.

The second bead string shows 4, 6 and then 7.

The final bead string shows how they have now been put together to find the total.

Add together three groups of objects. Draw a picture to recombine the groups to make 10.

$$\underbrace{4 + 7}_{10} + 6 = \boxed{10} + \boxed{7} = \boxed{17}$$

Combine the two numbers that make 10 and then add on the remainder.

Partitioning one number, then adding tens and ones.

Pupils can choose themselves which of the numbers they wish to partition. Pupils will begin to see when this method is more efficient than adding tens and taking away the extra ones, as shown.

$$22 + 17 = 39$$

$$22 + 17 = 39$$

Counting up in head:  
22, 32, 39.

Partitioning one number then counting 'on'.

Partition with cubes, dienes, bead string, counters, place value counters.

Pupils should be exposed to situations where they build an understanding of the fact that changing the order in which the parts are added or subtracted does not change the result.

Partitioning a number in their heads e.g,

1359

1 thousand  
3 hundreds  
five tens  
nine ones

Using known facts

(I know, so...)

$$5 \times 4 = 20$$

So  $50 \times 4 = 200$

So  $50 \times 40 = 2000$

Etc.

Reasoning chains can be of great use to encourage children to use their known facts.

Using near doubles e.g.

$$2.4 + 2.5 = \text{double } 2.4 + 0.1$$

Column method- no regrouping (exchanging)

$$24 + 15 =$$

Add together the ones first then add the tens. Use the Base 10 blocks first before moving onto place value counters.

After practically using the base 10 blocks and place value counters, children can draw the counters to help them to solve additions.

Tens	Ones
4	2
2	6
6	8

hundreds	tens	ones
4	5	5
1	0	3
5	5	8

$$\begin{array}{r}
 \text{Tens} \quad \text{Ones} \\
 42 \\
 + 26 \\
 \hline
 \boxed{6} \boxed{8}
 \end{array}$$

# Column method- regrouping (exchanging)

Make both numbers on a place value grid.

Add up the units and exchange 10 ones for one 10.

Add up the rest of the columns, exchanging the 10 counters from one column for the next place value column until every column has been added.

As children move on to decimals, money and decimal place value counters can be used to support learning.

Children can draw a pictorial representation of the columns and place value counters to further support their learning and understanding.

hundreds	tens	ones
3	5	8
	3	7
3	9	5

Start by partitioning the numbers before moving on to clearly show the regrouping below the addition.

$$\begin{array}{r}
 20 + 5 \\
 40 + 8 \\
 \hline
 60 + 13 = 73
 \end{array}$$

As the children move on, introduce decimals with the same number of decimal places and different. Money can be used here.

Use a line in between the final addend and the answer for exchanging.

**Count forwards or backwards in steps of powers of 10 for any given number up to 1 000 000**

**(including tenths and hundredths – Y6)**

*In Year 4, pupils use place value knowledge to mentally add and subtract multiples of 10, 100 and 1000 for numbers up to 10 000*

*In Year 5 this is extended to numbers up to 1 000 000.*

***In Year 6 this is extended to numbers up to 10 000 000.***

Place value grid with counters

Pay particular attention to boundaries where regrouping happens more than once. E.g.  $9900 + 100 = 10000$ ;  $99\ 900 + 100 = 100\ 000$ ;  $99\ 000 + 1000 = 100\ 000$

counting stick

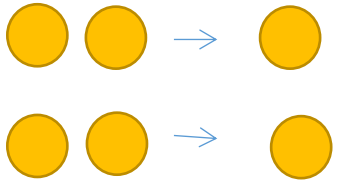

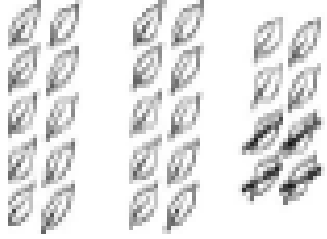

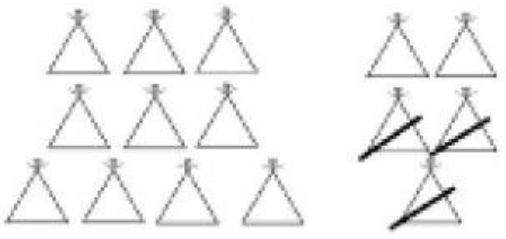

numberline

# Subtraction

Objective and Strategies	Concrete	Pictorial	Abstract
<p><b>Taking away ones</b></p> <p>When this is first introduced, the concrete representation should be based upon the diagram. Real objects should be placed on top of the images as one-to-one correspondence, progressing to representing the group of ten with a tens rod and ones with ones cubes.</p>	<p>Use physical objects, counters, cubes etc to show how objects can be taken away.</p> <p style="text-align: center;"><math>6 - 2 = 4</math></p>  	<p>Cross out drawn objects to show what has been taken away.</p>  <p style="text-align: center;"><math>28 - 4 =</math></p>  <p style="text-align: center;"><math>15 - 3 = \boxed{12}</math></p>	<p><math>18 - 3 = 15</math></p> <p><math>8 - 2 = 6</math></p>

## Part-part-whole

Pupils could place ten on top of the whole as well as writing it down. The parts could also be written in

along side the concrete representation.

$$10 = 6 + 4$$

$$10 - 6 = 4$$

$$10 - 4 = 6$$

$$10 = 4 + 6$$

## Counting back

Make the larger number in your subtraction. Move the beads along your bead string as you count backwards in ones.

$$13 - 4$$

Use counters and move them away from the group as you take them away counting backwards as you go.

Count back on a number line or number track

Start at the bigger number and count back the smaller number showing the jumps on the number line.

This can progress all the way to counting back using two 2 digit numbers.

Put 13 in your head, count back 4. What number are you at? Use your fingers to help.

## Find the difference

Compare amounts and objects to find the difference.

Use cubes to build towers or make bars to find the difference

Use basic bar models with items to find the difference

Count on to find the difference.

Draw bars to find the difference between 2 numbers.

### Comparison Bar Models

Lisa is 13 years old. Her sister is 22 years old.  
Find the difference in age between them.

Instead of subtracting or taking away, subtraction can be thought of as finding the difference between two values. Place the numbers either end of a numberline and work out the difference between them

This can be known as counting 'on' or 'back'

Hannah has 23 sandwiches, Helen has 15 sandwiches. Find the difference between the number of sandwiches.

## Part Part Whole Model

Link to addition- use the part whole model to help explain the inverse between addition and subtraction.

If 10 is the whole and 6 is one of the parts. What is the other part?

$$10 - 6 =$$

Use a pictorial representation of objects to show the part-part-whole model.

Move to using numbers within the part whole model.

## Make 10

$$14 - 9 =$$

Make 14 on the ten frame. Take away the four first to make 10 and then take away one more so you have taken away 5. You are left with the answer of 9.

Start at 13. Take away 3 to reach 10. Then take away the remaining 4 so you have taken away 7 altogether. You have reached your answer.

$$16 - 8 =$$

How many do we take off to reach the next 10?

How many do we have left to take off?

## Subtracting tens and adding extra ones.

Pupils must be taught to round the number that is being subtracted.  
Pupils will develop a sense of efficiency with

$$53 - 17 = 36$$

$$53 - 17 = 36$$

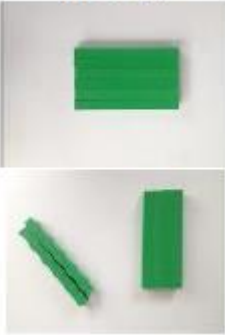

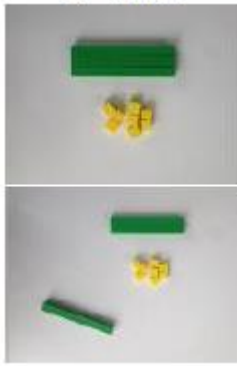

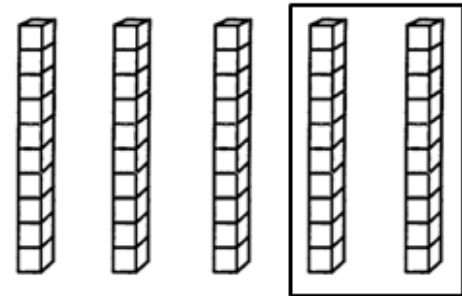

$$53 - 17 = 36$$

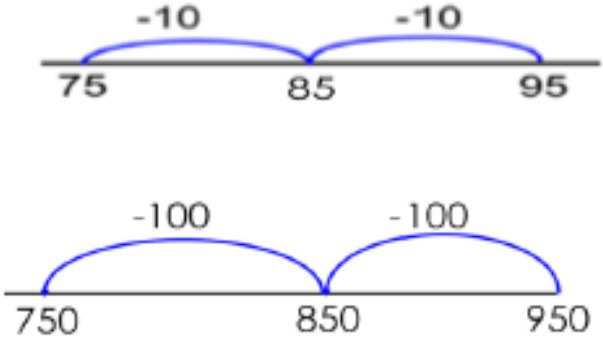

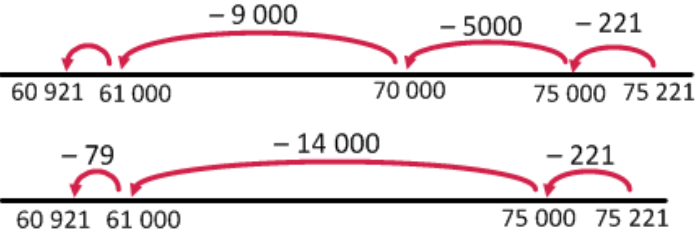

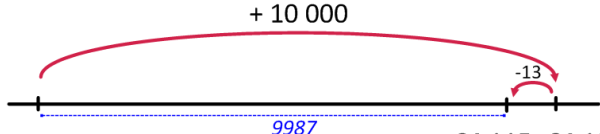

Round 17 to 20.

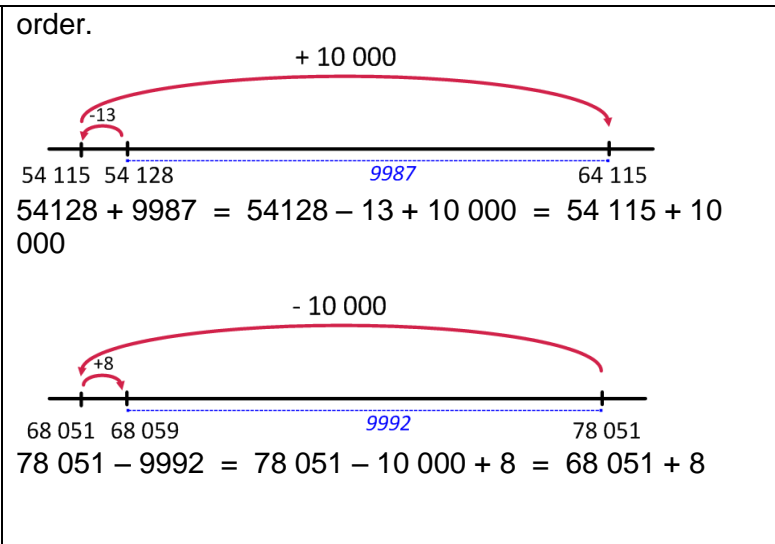

$$53 - 20 = 33$$

$20 - 17 = 3$  (number bonds)

$$33 + 3 = 36$$

<p>this method, beginning to identify when this method is more efficient than subtracting tens and then ones.</p>			<p>(we add because we took an extra 3 away when we subtracted 20 instead of 17).</p>
<p><b>Subtracting Multiples of Ten</b></p>	<p>Using the vocabulary of 1 ten, 2 tens, 3 tens etc. alongside 10, 20, 30 is important as pupils need to understand that it is a <b>ten</b> not a one that is being taken away.</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p><math>40 = 60 - 20</math></p>  </div> <div style="text-align: center;"> <p><math>38 = 10 = 28</math></p>  </div> </div>	<div style="text-align: center;">  </div> <div style="text-align: center; margin-top: 20px;"> <p>5 tens - 2 tens = ___ tens  <math>50 - 20 = \underline{\quad}</math></p> </div>	<p><math>32 - 10 = 22</math></p> <p>Look at the number of tens in the largest number. Count back in tens to subtract the smaller number. 30, 20. Add on the number of ones that we originally had. = 22</p>

<p>Counting back in multiples of ten and one hundred.</p>	 <p>Removing one group of 10 each time.</p>		<p>Counting back in 10s or 100s from any starting point.</p> <p>53, 43, 33 ...</p> <p>540, 440, 340 ...</p>
<p>Take away</p>		<p><b>Parts are place value amounts (canonical partitioning)</b></p>  <p>Pupils should understand that the parts can be subtracted in any order.</p> <p><b>Parts are not place value amounts (non canonical partitioning)</b></p> <p>Make ten, make hundred, make thousand, make one</p> 	
<p>Addition using compensation, rounding and adjustment</p>		 <p>54 128                                          64 115 64 128</p> <p>54 128 + 9987 = 54 128 + 10 000 - 13 = 64 128 - 13</p> <p>Highlight that the calculation can be done in another</p>	<p>Using near doubles.</p> <p>E.g.</p> <p>70 + 60 =</p> <p>60 + 60 - 120</p>

70 is 10 more than 60 so we need to add 10 more.

So the answer is 130

Column method without regrouping (exchanging)

Use Base 10 to make the bigger number then take the smaller number away.

Show how you partition numbers to subtract. Again make the larger number first.

Draw the Base 10 or place value counters alongside the written calculation to help to show working.

Calculations

$$\begin{array}{r} 54 \\ - 22 \\ \hline 32 \end{array}$$

Calculations

$$176 - 64 =$$

$$\begin{array}{r} 176 \\ - 64 \\ \hline 112 \end{array}$$

This will lead to a clear written column subtraction.

## Column method with regrouping (exchanging)

$$34 - 17 = 17$$

Use Base 10 to start with before moving on to place value counters. Start with one exchange before moving onto subtractions with 2 exchanges.

Make the larger number with the place value counters

Start with the ones, can I take away 8 from 4 easily? I need to exchange one of my tens for ten ones.

Now I can subtract my ones.

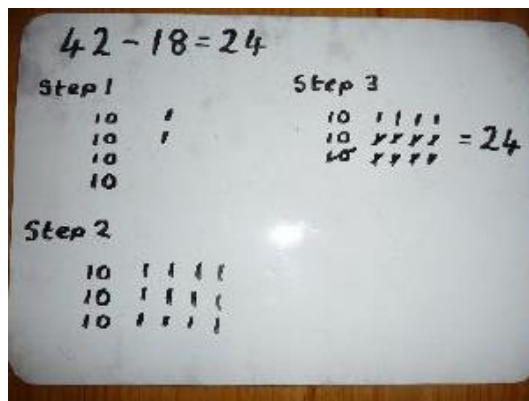

Now look at the tens, can I take away 8 tens easily? I need to exchange one hundred for ten tens.

Draw the counters onto a place value grid and show what you have taken away by crossing the counters out as well as clearly showing the exchanges you make.

When confident, children can find their own way to record the exchange/regrouping.

Just writing the numbers as shown here shows that the child understands the method and knows when to exchange/regroup.

Children can start their formal written method by partitioning the number into clear place value columns.

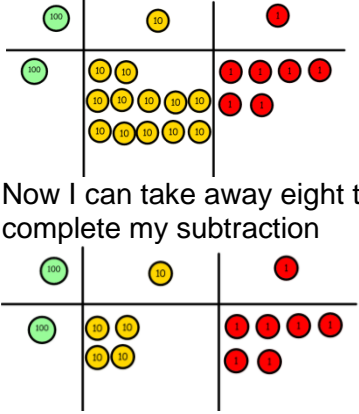

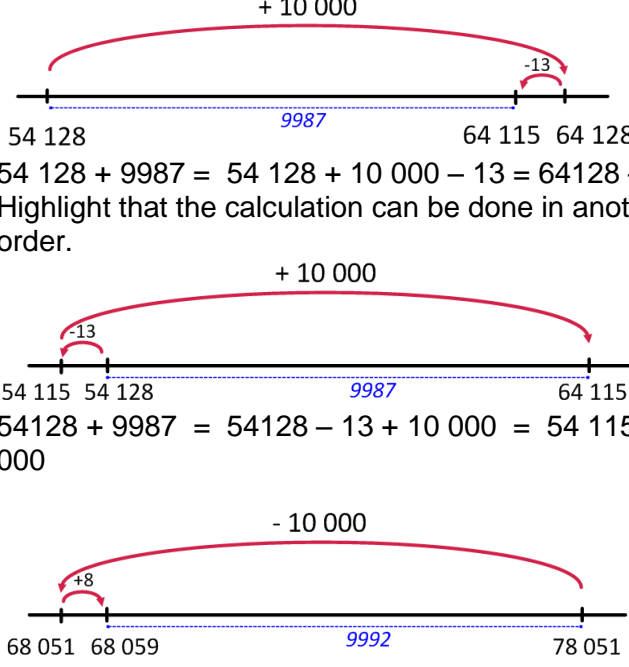

Moving forward the children use a more compact method.

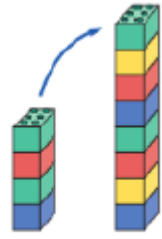

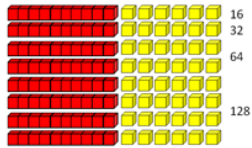

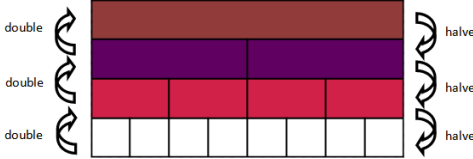

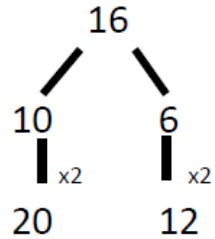

This will lead to an understanding of subtracting any number including decimals.

$$\begin{array}{r} 5 \quad 12 \quad 1 \\ 2 \quad \cancel{6} \quad \cancel{3} \quad . \quad 0 \\ - \quad 2 \quad 6 \quad . \quad 5 \\ \hline 2 \quad 3 \quad 6 \quad . \quad 5 \end{array}$$

	 <p>Calculations</p> $\begin{array}{r} 234 \\ - 88 \\ \hline \end{array}$ <p>Now I can take away eight tens and complete my subtraction</p> <p>Calculations</p> $\begin{array}{r} 234 \\ - 88 \\ \hline 146 \end{array}$ <p>Show children how the concrete method links to the written method alongside the working. Cross out the numbers when exchanging and show where we write our new amount.</p>		
<p>Subtraction using compensation, rounding and adjustment</p>		 <p><math>54\ 128 + 9987 = 54\ 128 + 10\ 000 - 13 = 64\ 128 - 13</math>  Highlight that the calculation can be done in another order.</p> <p><math>54\ 128 + 9987 = 54\ 128 - 13 + 10\ 000 = 54\ 115 + 10\ 000</math></p> <p><math>78\ 051 - 9992 = 78\ 051 - 10\ 000 + 8 = 68\ 051 + 8</math></p>	<p>Using near doubles.</p> <p>E.g.  <math>140 - 60 =</math>  <math>140 - 70 = 70</math></p> <p>70 is 10 more than 60 so we need to add 10 more.</p>

# Multiplication

Objective and Strategies	Concrete	Pictorial	Abstract
<p><b>Doubling and halving</b></p>	<p>Use practical activities to show how to double a number.</p>  <p>double 4 is 8 <math>4 \times 2 = 8</math></p> <p><b>multiply by 4 by doubling twice</b></p>  <p><math>16 \times 4 = 32 \times 2 = 64</math></p> <p><b>multiply by 8 by doubling three times</b></p>  <p><math>16 \times 8 = 32 \times 4 = 64 \times 2 = 128</math></p> <p><b>Cuisenaire rods</b></p> 	<p>Draw pictures to show how to double a number.</p> <p>Double 4 is 8</p> 	 <p>Partition a number and then double each part before recombining it back together.</p>

## Counting in multiples

Count in multiples supported by concrete objects in equal groups.

**M** MATHEMATICS MASTERY Resource 2  
Dotted paper (multiplication table of 5)

	1	2	3	4	5
0					
1	●	●	●	●	●
2	●	●	●	●	●
3	●	●	●	●	●
4	●	●	●	●	●
5	●	●	●	●	●
6	●	●	●	●	●
7	●	●	●	●	●
8	●	●	●	●	●
9	●	●	●	●	●
10	●	●	●	●	●
11	●	●	●	●	●
12	●	●	●	●	●

Use a number line or pictures to continue support in counting in multiples.

Dotted paper creates a visual representation for the different multiplication facts.

Count in multiples of a number aloud.

Write sequences with multiples of numbers.

2, 4, 6, 8, 10

5, 10, 15, 20, 25, 30

## Repeated addition

Use different objects to add equal groups.

There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there?

2 add 2 add 2 equals 6

5 + 5 + 5 = 15

$$5 + 5 + 5 + 5 + 5 + 5 + 5 + 5 = \square$$

Write addition sentences to describe objects and pictures.

2 + 2 + 2 + 2 + 2 = 10

# Arrays- showing commutative multiplication

Create arrays using counters/ cubes to show multiplication sentences.

Draw arrays in different rotations to find **commutative** multiplication sentences.

Link arrays to area of rectangles.

$12 = 3 \times 4$

$12 = 4 \times 3$

Use an array to write multiplication sentences and reinforce repeated addition.

$5 + 5 + 5 = 15$

$3 + 3 + 3 + 3 + 3 = 15$

$5 \times 3 = 15$

$3 \times 5 = 15$

## Bar Modelling

Cuisenaire rods can be used to create bars to represent multiplications.

There are 4 bags of sweets with 3 sweets in each bag.  
How many sweets are there altogether?

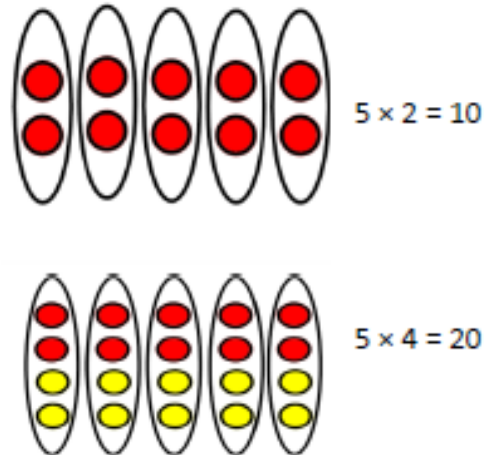

There are 3 school bags with 5 books in each one.  
How many books are there altogether?

## Doubling to derive new multiplication facts

Pupils learn that known facts from easier times tables can be used to derive facts from related times tables using doubling as a strategy.

I know  $4 \times 6 = 24$   
So,  $4 \times 12 = 48$   
And  $8 \times 6$  also = 48

e.g. double 2x table to find 4 x table facts or double 6x5 to find 12x5 etc.

Applying the associative property allows pupils to see that this is the known fact multiplied by powers of ten.  $7 \times 30 = 7 \times (3 \times 10) = (7 \times 3) \times 10$

2 100 000	700 000 x 3	70 000 x 30	7000 x 300	700 x 3000	70 x 30 000	7 x 300 000
210 000	70 000 x 3	7000 x 30	700 x 300	70 x 3000	7 x 30 000	
21 000	7000 x 3	700 x 30	70 x 300	7 x 3000		
2100	700 x 3	70 x 30	7 x 300			
210	70 x 3	7 x 30				
<b>21 = 7 x 3</b>						
2.1	0.7 x 3	7 x 0.3				
0.21	0.07 x 3	0.7 x 0.3	7 x 0.03			
0.021	0.007 x 3	0.07 x 0.3	0.7 x 0.03	7 x 0.003		

Inverse division facts can be derived:

$$\begin{array}{c}
 6 + 2 = 3 \quad 4 \times 3 = 12 \\
 6 \div 3 = 2 \quad 20 \times 3 = 60 \\
 \frac{1}{2} (4 \times 3) = 6 \quad 2 \times 3 = 6 \quad 200 \times 3 = 600 \\
 2 \times 1\frac{1}{2} = 3 \quad 40 \times 3 = 120 \\
 12 \times 3 = 10 \times 3 + 2 \times 3 = 30 + 6 = 36
 \end{array}$$

## Ten times bigger

Pupils's work on this must be firmly based on concrete representations – the language of ten times bigger must be well modelled and understood to prevent the numerical misconception of 'adding 0'.

Possible misconception: move the decimal point.

Th Thousands	H Hundreds	T Tens	U Units	• Tths Tenths	Hths Hundredths
		5	3	1	
		5	3	1	

Encourage children to keep the decimal point stationary and move the digits once to the left in order to make the number larger and the right to make the number smaller. This should only be used when the childrne understadn the

Cuisenaire rods

concept of this through the use of using concrete and pictorial resources.

### Multiplying by 10, 100 and 1000

$5 \times 1 = 5$ 
  
 $5 \times 10 = 50$ 
  
 $3 \times 1 = 3$ 
  
 $3 \times 100 = 300$

Th Thousands	H Hundreds	T Tens	U Units	• Tths Tenths	Hths Hundredths
		5	3	1	
5	3	1	0		

## Distributive property

You can use dienes, counters etc. to illustrate this using arrays. Drawing out the boxes (see right) and building them up can be useful.

$7 \times 8$  is  $7 \times 4$  and another  $7 \times 4$ :

$7 \times 8$  is  $5 \times 8$  and  $2 \times 8$ :

$$9 \times 7 = 9 \times 5 + 9 \times 2$$

## Multiplication of 2 digit numbers with partitioning (no regrouping)

$$3 \times 12$$

$$12 = 10 + 2$$

$3 \times 10$

$3 \times 2$

Now add the total number of tens and ones.

x	10	2
3		

x	10	2
3	30	6

$$3 \times 12 = 36$$

$$3 \times 12$$

10 and 2 make 12

$$3 \times 2 = 6$$

$$3 \times 10 = 30$$

$$30 + 6 = 36$$

Multiplication of 2 digit numbers with partitioning (regrouping)

3 x 25  
 20 and 5 make 25  
 3 x 5 = 15  
 3 x 20 = 60  
 And...  
 15 = 10 and 5  
 So...  
 60 + 10 = 70  
 7 + 5 = 75

Grid Method

Show the link with arrays to first introduce the grid method.

Move on to using Base 10 to move towards a more compact method.

Move on to place value counters to show how we are finding groups of a number. We are multiplying by 4 so we need 4 rows.

Children can represent the work they have done with place value counters in a way that they understand.

They can draw the counters, using colours to show different amounts or just use circles in the different columns to show their thinking as shown below.

Start with multiplying by one digit numbers and showing the clear addition alongside the grid.

x	30	5
7	210	35

$210 + 35 = 245$

Moving forward, multiply by a 2 digit number showing the different rows within the grid method.

Calculations  
4 x 126

Fill each row with 126.

Calculations  
4 x 126

Add up each column, starting with the ones making any exchanges needed.

Then you have your answer.

## Short multiplication

It is important at this stage that children always multiply the ones first and note down their answer followed by the tens which they note below.

Bar modelling and number lines can support learners when solving problems with multiplication alongside the formal written methods.

	10	8
10	100	80
3	30	24

X	1000	300	40	2
10	10000	3000	400	20
8	8000	2400	320	16

Start with long multiplication, reminding the children about lining up their numbers clearly in columns.

If it helps, children can write out what they are solving next to their answer.

$$\begin{array}{r}
 32 \\
 \times 24 \\
 \hline
 8 \quad (4 \times 2) \\
 120 \quad (4 \times 30) \\
 40 \quad (20 \times 2) \\
 600 \quad (20 \times 30) \\
 \hline
 768
 \end{array}$$

$$\begin{array}{r} 228 \\ \times 3 \\ \hline \end{array}$$

$$\begin{array}{r} \phantom{00}74 \\ \times \phantom{00}63 \\ \hline \phantom{00}12 \\ \phantom{00}210 \\ \phantom{00}240 \\ + \phantom{00}4200 \\ \hline 4662 \end{array}$$

This moves to the more compact method.

$$\begin{array}{r} \phantom{00}231 \\ \phantom{00}1342 \\ \times \phantom{00}18 \\ \hline \phantom{00}13420 \\ \phantom{00}10736 \\ \hline \phantom{00}24156 \\ \phantom{00}1 \end{array}$$

National Curriculum appendix:

### Long multiplication

24 × 16 becomes

$$\begin{array}{r} \phantom{0}2 \\ \phantom{0}24 \\ \times \phantom{0}16 \\ \hline \phantom{0}240 \\ \phantom{0}144 \\ \hline \phantom{0}384 \end{array}$$

Answer: 384

124 × 26 becomes

$$\begin{array}{r} \phantom{0}12 \\ \phantom{0}124 \\ \times \phantom{0}26 \\ \hline \phantom{0}2480 \\ \phantom{0}744 \\ \hline \phantom{0}3224 \\ \phantom{0}11 \end{array}$$

Answer: 3224

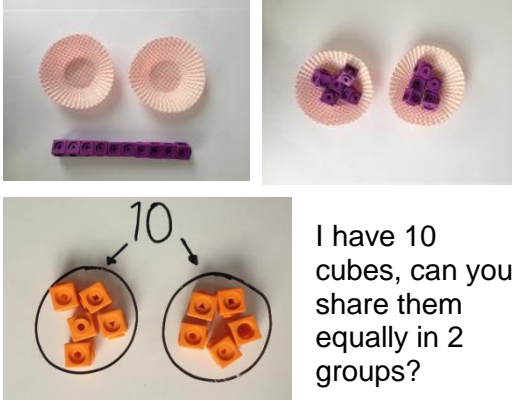

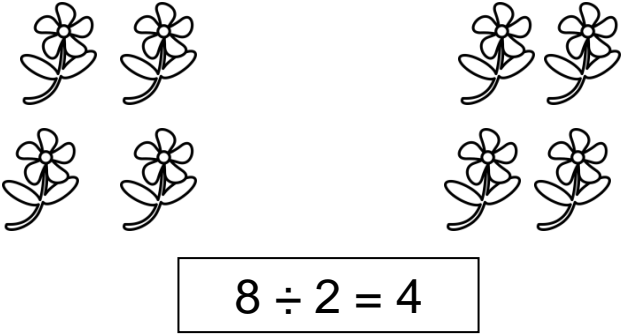

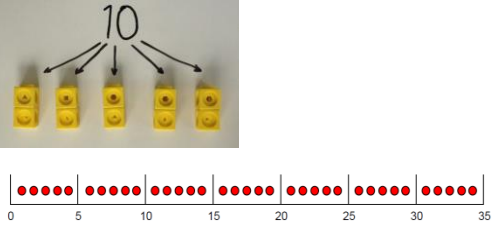

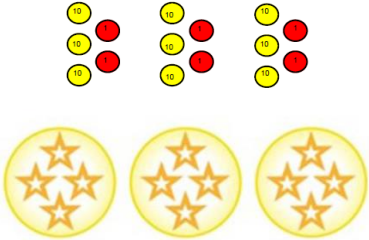

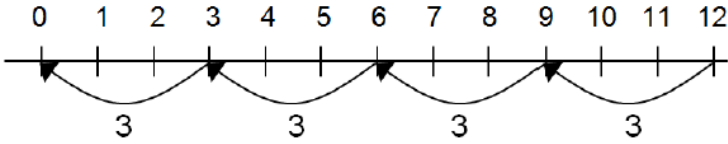

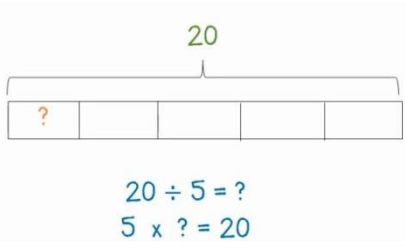

124 × 26 becomes

$$\begin{array}{r} \phantom{0}12 \\ \phantom{0}124 \\ \times \phantom{0}26 \\ \hline \phantom{0}744 \\ \phantom{0}2480 \\ \hline \phantom{0}3224 \\ \phantom{0}11 \end{array}$$

Answer: 3224

Note: Use a line in between the final factor and the answer for exchanging, rather than in the pictures to the left.

# Division

Objective and Strategies	Concrete	Pictorial	Abstract
<p>Sharing objects into groups</p>	 <p>I have 10 cubes, can you share them equally in 2 groups?</p>	<p>Children use pictures or shapes to share quantities.</p>  $8 \div 2 = 4$	<p>Share 9 buns between three people.</p> $9 \div 3 = 3$
<p>Division as grouping</p>	<p>Divide quantities into equal groups. Use cubes, counters, objects or place value counters to aid understanding.</p>  $96 \div 3 = 32$ 	<p>Use a number line to show jumps in groups. The number of jumps equals the number of groups.</p>  <p>Think of the bar as a whole. Split it into the number of groups you are dividing by and work out how many would be within each group.</p>  $20 \div 5 = ?$ $5 \times ? = 20$	$28 \div 7 = 4$ <p>Divide 28 into 7 groups. How many are in each group?</p>

## Dividing multiples of 10, 100 and 1000 by 10, 100 and 1000.

Pupils use the strategy of sharing into equal groups of tens, hundreds or thousands to reinforce their understanding of place value and the concept of division as sharing into equal groups. They master this skill with calculations where no partitioning is required, to prepare them for the next step

$$200 \div 100 = 2$$

Here the child has selected the 100 dienes to use because they're dividing by 100. So 200 divided into groups of 100 = 2 groups.

$$50 \div 10 = \square$$

$$6000 \div 200 = 30$$

"I know there are five groups of 200 in 1000 and I have six 1000s and  $5 \times 6 = 30$ ."

## Division within arrays

Link division to multiplication by creating an array and thinking about the

number sentences that can be created.

$$\begin{array}{ll} \text{Eg } 15 \div 3 = 5 & 5 \times 3 = 15 \\ 15 \div 5 = 3 & 3 \times 5 = 15 \end{array}$$

Draw an array and use lines to split the array into groups to make multiplication and division sentences.

Find the inverse of multiplication and division sentences by creating four linking number sentences.

$$\begin{array}{l} 7 \times 4 = 28 \\ 4 \times 7 = 28 \\ 28 \div 7 = 4 \\ 28 \div 4 = 7 \end{array}$$

## Division with a remainder

$14 \div 3 =$   
Divide objects between groups and see how much is left over

Jump forward in equal jumps on a number line then see how many more you need to jump to find a remainder.

Draw dots and group them to divide an amount and clearly show a remainder.

Complete written divisions and show the remainder using r.

$$29 \div 8 = 3 \text{ REMAINDER } 5$$

↑   ↑   ↑   ↑  
 dividend   divisor   quotient   remainder

## Short division

The difficulty with the short division algorithm comes with the confusion that can be caused by what you “think in your head”

The thought process of the traditional algorithm is as follows:

How many 4s in 8? 2

How many 4s in 5? 1 with 1 remaining so regroup.

How many 4s in 12? 3

How many 4s in 8? 2

Warning: If you simply apply place value

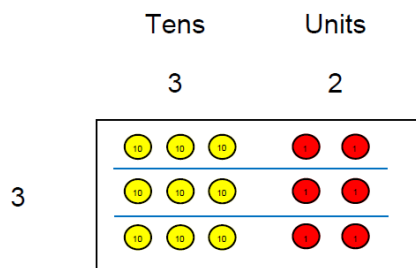

knowledge to each step, the thinking goes wrong if you have to regroup.

How many 4s in 500?

100 with 1 remaining (illogical) The answer would be 125

Sharing the dividend builds conceptual understanding however doesn’t scaffold the “thinking” of the algorithm.

Using place value counters and finding groups of the divisor for each power of ten will build conceptual understanding of the compact short division algorithm.

Use place value counters to divide using the bus stop method alongside

$42 \div 3 =$

Start with the biggest place value, we are sharing 40 into three groups. We can put 1 ten in each group and we have 1 ten left over.

We exchange this ten for ten ones and then share the ones equally among the groups.

We look how much there is in 1 group; the answer is 14.

Students can continue to use drawn diagrams with dots or circles to help them divide numbers into equal groups.

Encourage them to move towards counting in multiples to divide more efficiently.

Begin with divisions that divide equally.

$$\begin{array}{r} 218 \\ 3 \overline{) 872} \end{array}$$

Move onto divisions with a remainder.

$$\begin{array}{r} 86 \text{ r } 2 \\ 3 \overline{) 432} \end{array}$$

Finally move into decimal places to divide the total accurately.

$$\begin{array}{r} 14.6 \\ 35 \overline{) 511.0} \end{array}$$

See below for written strategies:

$$\begin{array}{r} 2132 \\ 4 \overline{) 8528} \end{array}$$

Sharing

Share 8528 into 4 equal groups.  
 8 thousands shared into 4 equal groups  
 5 hundreds shared into 4 equal groups  
 Regroup 1 hundred for 10 tens  
 12 tens shared into 4 equal groups  
 8 ones shared into 4 equal groups

Grouping

How many groups of 4 in 8528?  
 How many groups of 4 thousands in 8 thousands?  
 How many groups of 4 hundreds in 5 hundreds?  
 Regroup 1 hundred for 10 tens  
 How many groups of 4 tens in 12 tens?  
 How many groups of 4 ones in 8 ones?

Written version of a mental strategy for 3-digit ÷ 1 digit numbers

$$\square \times 6 = 326$$

$$326 \div 6 = 54 \text{ r}2$$

$$50 \times 6 = 300$$

$$26$$

$$4 \times 6 = 24$$

$$2$$

$$54 \text{ r}2$$

Short division of 3-digit and 4-digit numbers by single-digit numbers

$$\begin{array}{r} 1264 \\ 6 \overline{) 75824} \end{array}$$

## Long Division

The short division method can be applied for 11 and 12 using times tables knowledge. Factors should be used to break down the calculation and apply the short division method. If the divisor is a prime number see opposite.

$$\begin{array}{r} 212 \\ 13 \overline{) 2756} \\ \underline{26} \phantom{0} \\ 15 \phantom{0} \\ \underline{13} \phantom{0} \\ 26 \phantom{0} \\ \underline{26} \\ 0 \end{array}$$

$$\begin{array}{r} 212 \\ 13 \overline{) 2756} \\ \underline{2600} \\ 156 \\ \underline{130} \\ 26 \\ \underline{26} \\ 0 \end{array}$$

### Short division

$98 \div 7$  becomes

$$\begin{array}{r} 14 \\ 7 \overline{) 98} \\ \underline{7} \phantom{0} \\ 28 \\ \underline{28} \\ 0 \end{array}$$

Answer: 14

$432 \div 5$  becomes

$$\begin{array}{r} 86 \text{ r } 2 \\ 5 \overline{) 432} \\ \underline{40} \phantom{0} \\ 32 \\ \underline{30} \\ 2 \end{array}$$

Answer: 86 remainder 2

$496 \div 11$  becomes

$$\begin{array}{r} 45 \text{ r } 1 \\ 11 \overline{) 496} \\ \underline{44} \phantom{0} \\ 56 \\ \underline{55} \\ 1 \end{array}$$

Answer:  $45\frac{1}{11}$

### Long division

$432 \div 15$  becomes

$$\begin{array}{r} 28 \text{ r } 12 \\ 15 \overline{) 432} \\ \underline{30} \phantom{0} \\ 132 \\ \underline{150} \\ 120 \\ \underline{120} \\ 0 \end{array}$$

$432 \div 15$  becomes

$$\begin{array}{r} 28 \\ 15 \overline{) 432} \\ \underline{30} \phantom{0} \\ 132 \\ \underline{150} \\ 120 \\ \underline{120} \\ 0 \end{array}$$

$15 \times 20 = 300$   
 $15 \times 8 = 120$

$$\frac{12}{15} = \frac{4}{5}$$

$432 \div 15$  becomes

$$\begin{array}{r} 28.8 \\ 15 \overline{) 432.0} \\ \underline{30} \phantom{0} \\ 132 \\ \underline{150} \\ 120 \\ \underline{120} \\ 0 \end{array}$$
